

ABSTRACT OF THE DISCLOSURE

A system and method for providing project management tools to support construction, renovations, maintenance and other projects. The system automates the creation, processing and approval cycles of the numerous documents involved with each project. The system provides standardized work processes through processing templates. The system provides automated control and management of the process. The system allows project initiation and funding approval by clients throughout the corporation via a desktop browser coupled to a corporate Intranet. A software application embodying the present invention and its underlying technology are appropriate for a paper intensive area. It reduces the approval cycle of projects. It automates the creation, processing and approval cycle of documents by routing documents electronically for on-line approval.
